Abstract: To describe nature, we must set principles! Nature working with the principle of the infinite fraction of matter, only it has just been detected by the accelerators!

Until now, the material has operated on the principle of the minimum indivisible. And the least indivisible thing is the bubbles-particles, which I described in my atomic physics and worldview! My worldview is the book prophesied by John in REVELATION!

Subatomic particles can have a charge or not. For example, neutrinos don't have!

There are well-founded suspicions that nature is heading towards the beginning of the infinite part!

Keywords: Nature working, infinite fraction, atomic physics.

1. INTRODUCTION

In ancient Greece, two tendencies were formed for the structure of matter and two opposing principles were set! On one side, stands Democritus. Democritus (I don't mention it with the word he used, so as not to cause confusion), argued that there are very few indivisible particles in matter, this was a qualitative choice, or rather a principle, and you say that they are atoms, electrons, quarks, partons and whatever you want, (I say that they were infinitesimal bubbles-particles, thin ether!).

On the other side stood Anaxagoras, who said that he sets the principle, that matter is divided into infinity!

In my long career, I first adopted the principle of infinite segment (there is no reason to justify)! But then I realized that physicists can't be so wrong, the universe is finite! This means that there is a minimum indivisible! I also read an ancient Christian text, where the author mocked the ancient different theories of the ancient philosophers that often contradicted, but is it time to get serious?

2. METHODOLOGY

The ancient Greek philosophers, in order to make their theories, set principles! Principles are the prerequisites, the beginning of their philosophy! I, even in atomic physics, set principles. Remember when I put Balmer's empirical formula as a starting point! You will remember that in other works I accepted the principle of Democritus, which is minimally indivisible!

Here we will set the principle of the infinite divisible of Anaxagoras and perhaps now we will understand what we find in proton collisions (?) in accelerators (CERN etc.).

We maintain the principle of the empirical type and use logical induction, or abduction, as a religion! And if it's a mathematical induction, it's good to try many times before deciding!

The description used is made under the rule of the above!

3. FIRST OF THE APPLIED MATHEMATICS THERE

Refer to my paper THE NEW NATURE WITH THE PRINCIPLE OF THE INFINITE PART OF MATTER, here I will mention a few. In infinite calculus we use d , the limit that tends to zero, but never reaches it! The limit of the derivative changes, it is not appropriate to use, $\frac{dy}{dx} = \lim_{x \rightarrow 0} x \frac{(x+dx)-x}{dx}$, but, $dy=kdx$, times $y=kx$.

All the infinite series are stumbling blocks in the matter of the minimally indivisible!

In the matter of the infinite divisible, the series are infinite!

Look now, in atomic physics, whether Bohr or I found a mechanical energy of the hydrogen atom constant E_0 ! But is it so? If you look at the mathematical series, not the power series, there are infinite series, the sum of which is a unit! Especially the series, $\sum_{n=1}^{\infty} \frac{1}{2^n} = 1$ and I estimated that this is the one that applies here! So, $E_0 = E \sum_{n=1}^{\infty} \frac{1}{2^n} = E_0$. But we said that in the nature of the minimally indivisible, the series ends somewhere, it's a stumbling block! So, $E_0 < E \sum_{n=1}^{\infty} \frac{1}{2^n} = E_0$

If you read the story of Bishop Eusebius of Caesarea, who also preserves excerpts from the story of Apollodorus of Rhodes, people lived tens of thousands of years ago, tens of thousands of years! And now you understand why they were also dying, look again at the energy inequality! Long-term loss of energy!

Look now, because Lucifer had approached my worldview and was influencing the control center of the universes, and because the Kings of the earth killed the giants, imposed the inequality, $E_0 < E \sum_{n=1}^{\infty} \frac{1}{2^{kn}} = E_0$, $k > 1$. Then we reached the life expectancy we have today!

WHAT HAPPENED

I tell a friend, I, on a few occasions, influenced the control center of the universes! But nature operates on the principle of the minimally indivisible and not on the principle of the infinite part! He tells me, make it work with the principle of infinite segments!

THE NATURE OF THE INFINITE PORTION OF MATTER

There at CERN, they had proton and non-proton collisions, and they took subatomic particles! They actually collided with ionized hydrogen atoms, but they were actually taking fragments sub-atoms! So, in order to get serious, they detected what the matter would be like with the beginning of the infinite part! If they are serious, I give them the floor, so that they can describe the material that is heading to the infinite part!

THE ROAD TO THE INFINITE SECTION

Subatomic particles may have a fractional charge, or they may not have any charge at all! For example, neutrinos have no charge!

REASONABLE SUSPICIONS THE MATTER IS HEADED WITH THE PRINCIPLE OF INFINITE PART

Of course, as you know, cosmic changes are slow! But here, because the control center has the experience and the instructions that it has taken, for the creation of the universes, with the principle of the least indivisible, now if it realizes the principle of the infinite part, it will realize quickly! This means that the order will be a unit and the energy of the individual will be preserved eternally! And new universes will be created, the space of which will tend towards infinity. And the experiential infinity will be maintained for each universe separately (e.g., the atoms of the universe will be experientially infinite!)

THE NEW HEAVEN AND THE NEW EARTH WERE PROPHESED BY JOHN IN REVELATION! And John was the one who shaped Christianity, even though Christ taught!

EPILOGUE

To describe nature, we must set principles! Nature working with the principle of the infinite fraction of matter, only it has just been detected by the accelerators!

Until now, the material has operated on the principle of the minimum indivisible. And the least indivisible thing is the bubbles-particles, which I described in my atomic physics and worldview! My worldview is the book prophesied by John in REVELATION!

Subatomic particles can have a charge or not. For example, neutrinos don't have!

There are well-founded suspicions that nature is heading towards the beginning of the infinite part!
